SUMMARY

Gameplay Programmer specializing in Unreal Engine 5 and C++, with hands-on experience building gameplay systems using the Gameplay Ability System (GAS). Experienced in combat systems, AI, custom Ability Tasks, UI architecture, animation, and Niagara VFX.

TECHNICAL SKILLS

Languages	C++, C, Python
Engine	Unreal Engine 5.6, Godot
Gameplay	Gameplay Ability System (GAS), Gameplay Tags, Gameplay Effects, Custom Ability Tasks, Enhanced Input, Animation Blueprints
AI	Behavior Trees, EQS
UI / VFX	Common UI, Niagara VFX, Data Assets
Tools	Git, Git LFS, Visual Studio, Conventional Commits, UE5 repository configuration

PROJECTS

Advanced RPG	<i>Unreal Engine 5.6 • C++ • GAS</i>
<i>Third-Person Action RPG with a modular gameplay and combat framework</i>	<i>GitHub</i>
- Architected a modular GAS-based gameplay framework supporting multiple abilities, weapon types, and character classes with clean separation of gameplay responsibilities. - Implemented 15+ custom Ability Tasks for gameplay behaviors including homing projectiles, wall projectile patterns, expanding-ring attacks, clone summoning, and enemy spawning. - Built a responsive combat system with light/heavy attack combos, active block and parry, timing-based counter-attacks, target locking, and dodge i-frames using GAS and Gameplay Cues. - Developed multi-phase boss AI using Behavior Trees and EQS, supporting melee attacks, aerial and ground enemy summons, homing curved projectiles, and dynamic phase transitions. - Created ability-driven gameplay mechanics including clone summoning, wolf summons, ice clone decoys, character transformation, and multi-weapon rage modes with Niagara VFX. - Engineered a Common UI-based frontend architecture using Activatable Widgets, CommonButtonBase, and CommonTabListWidget; implemented AsyncActions for widget transitions, confirmation screens, and dynamic settings management.	

EDUCATION

Indian Institute of Information Technology Ranchi	<i>Jharkhand, India</i>
<i>B.Tech in Artificial Intelligence and Data Science</i>	<i>Expected April 2027</i>
7th Semester (Final Year) • Relevant Coursework: Machine Learning, Deep Learning, Data Structures & Algorithms, Computer Graphics, DBMS.	
Completed a 44-hour Udemy certification in Unreal Engine 5 / C++ Game Development.	

ADDITIONAL INFORMATION

- Full UE5 C++ workflow experience including AnimInstances, SaveGame systems, UI Components, AsyncActions, and frontend subsystems.
- Strong version-control practices using Git and Git LFS, including conventional commits and UE5-specific repository configuration.
