SUMMARY

Gameplay Programmer specializing in Unreal Engine 5 and C++, with deep expertise in the Gameplay Ability System (GAS). Experienced in building scalable combat frameworks, AI behavior systems, and AAA-inspired gameplay mechanics from the ground up. Passionate about clean architecture, performance, and delivering polished player experiences.

TECHNICAL SKILLS

Engines:	Unreal Engine 5, Godot
Languages:	C++, C, Python, Java, Blueprints
Gameplay Systems:	Gameplay Ability System (GAS), Animation Blueprints, Niagara VFX
AI & Tools:	Behavior Trees, EQS, Custom Ability Tasks, Data Assets
DevOps:	Git, Git LFS, Conventional Commits, .gitattributes/.gitignore for UE5

PROJECTS

Advanced RPG

Unreal Engine 5 • C++ • GAS

Third-Person Action RPG with AAA-Inspired Combat Framework

🐙 GitHub

- Architected a scalable GAS framework from scratch, enabling modular ability design across multiple weapon types and character classes with clean separation of concerns.
- Implemented 15+ custom Ability Tasks including homing projectiles, wall projectile patterns, expand-ring attacks, clone summoning, and enemy spawn systems for complex boss encounters.
- Built a responsive combat system featuring light/heavy combo chains, active block & parry with timing-based counter-attacks, target locking, and dodge i-frames integrated via GAS Gameplay Cues.
- Developed multi-phase Boss AI using Behavior Trees and EQS, supporting hand/leg attacks, enemy summons (aerial & ground), homing curved projectiles, and dynamic phase transitions.
- Created AAA-inspired special abilities: Wukong-style clone summoning, wolf summons, ice clone decoys, character transformation, and multi-weapon rage modes with Niagara VFX integration.
- Engineered a robust UI/FrontEnd architecture using the Common UI plugin with Activatable Widgets, Common-ButtonBase, and CommonTabListWidget; implemented AsyncActions for soft widget pushing, confirm screens, and an OptionsDataRegistry with ListDataObjects for dynamic settings management.

EDUCATION

Indian Institute of Information Technology Ranchi

Jharkhand, India

B.Tech in Artificial Intelligence and Data Science

Expected April 2027

- 7th Semester (Final Year). Relevant Coursework: Machine Learning, Deep Learning, Data Structures & Algorithms, Computer Graphics, DBMS. Completed 44-hour Udemy certification in UE5/C++ Game Development.

ADDITIONAL INFORMATION

- Proficient in full UE5 C++ workflow: AnimInstances, SaveGame systems, UI Components, AsyncActions, and Frontend subsystems.
- Strong version control practices with Git LFS, conventional commits, and UE5-specific repository configuration.
